How to build a national chatbot

One conversation. Many carefully built knowledge systems.
Consolidating Philippine public information through Kuya J.

Kuya J

Built by 1 person. Zero funding.

Months of source-building work.
One conversational front door.

01 Start with sources built over months

Each source maintains its own collection, cleaning, indexing and updates.

Laws & court decisions juris.ph	**Bills & authors** bills.juris.ph	**National budgets** budget.bettergov.ph	**Government services** bettergov.ph	**Officials & elections** officials.bettergov.ph
PSA statistics statistics.bettergov.ph	**Classification codes** statistics.bettergov.ph	**Flood control** flood-control.bettergov.ph	**Public works** api.dpwh.bettergov.ph	**Regional indicators** asean.bettergov.ph

RAG / semantic search
Find relevant passages in existing source systems.

Structured APIs
Retrieve exact records, tables and available totals.

Read-only APIs + MCP tools
Configured access to independent knowledge systems.

llms.txt + documentation
Guides for discovery and integration; not live data endpoints.

↑ Lookup requests ↓ Records, passages & metadata

02 Connect them through one chatbot

1. **Ask Kuya J**
   Ask in English, Filipino or Taglish.
   "What does the Data Privacy Act say?"
2. **Jev routes and screens**
   Checks spam and prompt injection. Selects relevant source families and a lookup type.
   Legal question → juris.ph
3. **The app makes lookups**
   AI chooses a permitted tool and arguments. Code validates and calls the source API or MCP.
   ↑ Lookup · ↓ Source results
4. **Jev checks the results**
   Keep useful context. Drop suspicious instructions. Flag conflicting information.
   Useful context moves forward
5. **AI consolidates; Kuya J streams**
   Combines accepted information from multiple sources into one clear answer with references.
   Optional Debug shows the steps

No usable results? Give a friendly message to rephrase or try again.

03 Consolidate multiple sources into one answer

When a question spans sources, AI brings their accepted information together.

- Law passages
- Public records
- Statistical tables

→

One clear answer
Combined context + source references.
Conflicts and limitations stay visible.

Sources own retrieval and maintain the knowledge.

Jev makes routing and filtering judgments.

AI chooses tools, combines and explains.

API
A doorway through which software requests data.

MCP
A shared protocol for exposing tools to AI apps.

RAG
Retrieve information before generating an answer.

llms.txt
A guide to a site's useful content and documentation.
