Using JEV as a chatbot router

Kuya J · Screen requests. Route lookups. Filter context.

BetterGov.PH

Kuya J

KUYA J · CHAT PIPELINE

Jev supplies judgments. Code applies policy.

Browser / PWA
Ask + validate

English · Filipino · Taglish

JEV / INPUT — 17 judgments · 1 request

Conversation aware
Latest question + conversation history

Batched screening
Spam · prompt injection · jailbreak
Programming · recipes

Source routing
Primary source + 10 relevance judgments

Lookup intent
Search · exact record · statistics
Comparison · catalog · no lookup

Blocked

Friendly reply
No answer-model call

AI · tool planning
Choose tool + arguments
Selected tools + lookup intent

Code: up to 4 source families
Uncertain → all 10

Code
Read-only lookup

Lookup

More needed

Dropped result → retry

Bounded research loop
Limits + duplicate-call checks

JEV / CONTEXT — Batched results

Relevance + injection
Check source text and metadata

Metadata screening
Citation titles + URLs

Preserve discovery data
Useful IDs · schemas · dimension codes

Results

Keep

Accepted context
+ citations

AI
Consolidate sources

Stream answer
Sources + Debug

Debug: judgments · routes · filter decisions · timing · Jev token usage
Civic lookup flow shown · source pages first, main site fallback

Flow

Block / retry

Existing knowledge projects

Independently built & maintained

Documents + datasets
Public information

Source-owned retrieval
RAG · indexes · tables · records

Published APIs + MCP
Records · passages · metadata

SOURCE DOMAINS

- juris.ph
- bills.juris.ph
- budget.bettergov.ph
- statistics.bettergov.ph
- officials.bettergov.ph
- bettergov.ph
- api.dpwh.bettergov.ph
- flood-control.bettergov.ph
- asean.bettergov.ph

APIs + MCP → live lookups

Docs + llms.txt → integration guidance

Retrieval stays with each source.
No new central vector database.

Stop blocked requests early

Efficiency = avoided AI work − Jev screening overhead

Send fewer tool schemas

Exclude rejected source text
